

Hassan Zafar

Senior Flutter Developer | Cross-Platform Mobile Engineer | iOS & Android

dev.hassanzafar@gmail.com | +92-332-6928633 | hassanzafar.netlify.app | linkedin.com/in/hassanzafar15 | github.com/HassanZafar15 | Islamabad, Pakistan | Open to Remote

SUMMARY

Senior Flutter Developer with 5+ years building and shipping production mobile applications across fintech, healthtech, travel, and workforce management on iOS and Android. Manages the complete mobile development lifecycle, from architecture and Platform Channels through CI/CD automation, App Store deployment, and post-launch support. Deep expertise in Riverpod, BLoC, Clean Architecture, TDD, unit testing, widget testing, integration testing, and pixel-perfect UI with CustomPainter and Rive animations. Consistently cuts release cycles, lowers bug rates, and improves app performance in Agile/Scrum cross-functional product teams. Available for remote senior Flutter developer roles.

SKILLS

Core: Flutter, Dart, iOS, Android, Cross-Platform Mobile Development, Platform Channels, Custom Native Plugins (Kotlin, Swift), Plugin & Package Development

State Management: Riverpod, BLoC, Provider, GetX, setState

Architecture & Patterns: Clean Architecture, MVVM, MVC, SOLID Principles, GOF Design Patterns, TDD, App Performance Optimization, Responsive Design

Data & Backend: Firebase (Firestore, Auth, Cloud Messaging, Crashlytics, Remote Config, Analytics, Realtime DB, Storage), REST APIs, GraphQL, WebSockets, Socket.IO, SQLite, Hive, Isar, Supabase

UI & Animation: CustomPainter, Implicit/Explicit Animations, Rive, Pixel-Perfect UI, Flutter Widget Catalog

Testing & Quality: Unit Testing, Widget Testing, Integration Testing, Firebase Performance Monitoring, Code Review

CI/CD & DevOps: GitHub Actions, Codemagic, Azure DevOps, App Center, App Store Connect, Google Play Console, Code Signing, Docker, Agile/Scrum, Git

Payments & Notifications: PayPal SDK, In-App Purchases (StoreKit / Google Play Billing), APNs, FCM, WCAG Accessibility

AI & ML: TensorFlow Lite, ML Kit, OpenAI API, Gemini API

WORK EXPERIENCE

Senior Flutter Developer | Dopasi Foundation Feb 2025 – Present

Non-profit digital health foundation | Islamabad, Pakistan

- Took sole ownership of the foundation's Flutter app from zero: architecture, development, QA, and App Store/Play Store launch, delivering a stable production release with zero critical post-launch incidents across iOS and Android.
- Designed and implemented a GitHub Actions CI/CD pipeline and Git branching strategy from scratch, reducing release cycle time by 30% and making every deployment repeatable and auditable.
- Acted as the technical voice in product roadmap discussions with foundation leadership, translating organizational goals into shipped features on every committed deadline.
- Maintained release stability through structured device-matrix testing, triage processes, and proactive performance profiling that caught bottlenecks before they reached end users.

Senior Flutter Developer | Abacus Consulting Jul 2022 – Feb 2025

Multi-national technology firm | Islamabad, Pakistan (US, UK, UAE offices)

- Led mobile development across multiple simultaneous client engagements, owning the complete product lifecycle from architecture through deployment and post-launch support; reduced average time-to-market by 20% via CI/CD pipelines on Codemagic and GitHub Actions.
- Engineered pixel-perfect, responsive UIs using Flutter's widget catalog, Dart isolate optimization, lazy loading, and targeted widget rebuild strategies, improving client satisfaction scores by 25% and eliminating jank on mid-range devices.

- Cut production bug rates by 30% by introducing Test-Driven Development spanning unit, widget, and integration test layers, replacing manual QA with automated coverage that caught regressions before production.
- Built offline-first data storage with SQLite and Hive, applying best practices that kept apps fully functional on unreliable connections and increased session retention by 18% (measured via Firebase Analytics).
- Integrated Flutter animation layers (implicit, explicit, Rive) alongside Firebase services including Firestore, Auth, Cloud Messaging, Remote Config, and Crashlytics across 4 simultaneous client apps, maintaining zero regression incidents post-integration.
- Guided 2 Flutter interns through hands-on code reviews and architecture walkthroughs, bringing both to independent feature delivery within a single internship cycle.
- Served as senior developer on EPADS, a World Bank-funded national procurement platform for the Government of Pakistan, delivering features against PPRA compliance requirements within a structured cross-functional enterprise team.

Flutter Developer | Ropstam Solutions Inc. Mar 2021 – Jul 2022

Mobile and product development agency | Islamabad, Pakistan (Canada, India offices)

- Designed and shipped 4 cross-platform apps (iOS and Android) end-to-end, integrating Google Maps, PayPal, and Firebase while meeting agreed delivery timelines on every project.
- Lowered post-release defect rates by 22% by replacing manual QA with structured unit and integration test workflows; applied GOF design patterns and Clean Architecture to keep codebases maintainable at scale.
- Integrated third-party SDKs and wrote custom Flutter packages to accelerate feature delivery and maintain clean, reusable codebases across all 4 projects.

Junior Flutter Developer | NexConcept Mar 2020 – Mar 2021

Lahore, Pakistan

- Delivered pixel-accurate UI components across 3 mobile projects on iOS and Android, resolving 30+ reported defects with consistent cross-device rendering throughout.
- Decreased QA escalation overhead by 3-4 hours per sprint through proactive performance profiling, memory management checks, and integration testing.

PROJECTS

EPADS: e-Pak Acquisition and Disposal System: <https://eprocure.gov.pk>

Flutter · REST APIs · Firebase · Clean Architecture · Government Compliance

Abacus Consulting | Client: PPRA, Government of Pakistan | World Bank-funded

- Senior developer on a national-scale platform digitising Pakistan's entire public procurement lifecycle: planning, tendering, contract management, and disposal, covering thousands of government institutions.
- Delivered features against PPRA compliance and World Bank project requirements within a cross-functional enterprise team, replacing manual processes with a secure, auditable web platform.

Tjwalnet: Travel eSIM and Data Plan App

Flutter · Firebase · PayPal SDK · Google Maps · In-App Wallet · eSIM Integration

iOS: [App Store](#) | Android: [Google Play](#)

- Built a region-aware eSIM package selection system with 90+ packages spanning 150+ countries, enabling travellers to purchase localized data plans before or during travel.
- Connected PayPal, an in-app wallet, a points-based reward system, Google Maps, and Firebase real-time data into a single travel connectivity experience, live on Google Play with 100+ downloads.

GuardTrack / Surrey Security Staff: Workforce Management Suite

Flutter · REST APIs · Firebase · Google Maps · Background Location · Push Notifications

iOS (GuardTrack): [App Store](#) | Android: [Google Play](#)

iOS (Surrey Security Staff): [App Store](#) | Android: [Google Play](#)

- Engineered a dual-app Flutter platform for 500+ active security officers, covering shift assignments, site check-in/check-out, and real-time Google Maps tracking with concurrency-safe background updates.

- Achieved a 95% on-time check-call completion rate by integrating push notifications and REST API services for live operational alerts.

EDUCATION

Bachelor of Science in Computer Science 2018 – 2022

Capital University of Sciences and Technology (CUST) | Islamabad, Pakistan

CERTIFICATIONS & WORKSHOPS

- Flutter Meetup, Certificate of Participation, 10 Pearls University, Islamabad (2024)
- Flutter With AI, Certificate of Participation, NICAT, Islamabad (2025)
- Build With AI 2026 Workshop, GDG Cloud Islamabad at Kickstart, Islamabad (2026), AI technologies, cloud solutions, and practical implementation strategies.
- Build With AI 2026 Workshop, GDG Cloud Islamabad at Based Coworking Space, Islamabad (2026), Generative AI tools, machine learning concepts, and modern AI development practices.
